

# Floating Head Bulk Storage Tank Model

Model: 295-203

DAC Worldwide's Floating Head Bulk Storage Tank Model (295-203) is a highly-detailed scale model of a common floating head storage tank, as used in refineries, petrochemical plants, and other processing, production, and storage applications.

This model reflects common designs and is a complete, to-scale replication. The primary shell includes a cutaway, allowing for all internal features to be seen. The product supports orientation, operations, and maintenance training programs relating to the refining as well as the oil and gas industry.

The model features exact "to-scale" construction throughout with a 15" primary tank diameter and a representative concrete foundation. Exterior detail includes access stairs, process connections, manways, plate detail, and access platform. Interior detail includes representative, articulated roof drain system; fire protection/suppression system; vents; primary and secondary roof seals, with detail; and drain/sump.

The model is painted using a high-durability coating. It comes mounted on a durable PVC baseplate.
