

Pump Maintenance and Alignment Training System Plus

Model: 275E-PAC

DAC Worldwide's Pump Maintenance and Alignment Training System Plus (275E-PAC) is a realistic, benchtop training system relating to industrial pumps. Using an actual standard ANSI centrifugal pump, the training system allows for instruction in the complete tear-down and assembly procedure for this common pump type.

Additionally, a clear acrylic backhead is provided, allowing for realistic instruction in pump packing procedures and the installation of mechanical seals.

Pump Maintenance Training System Offers Hands-On Industrial Learning

Further, a simulated motor element is provided, allowing for training in shaft alignment. This motor element, through movable flanged bearings, allows for variation in angular and parallel misalignment.

The training system plus includes the following components: ANSI centrifugal pump, backhead/stuffing box, aluminum motor element, replaceable steel shaft with keyways, and aluminum motor mounting pads. The training system plus also includes:

- #275E - [Pump Maintenance with Alignment Trainer](#)
- #275-001 - Tool Kit
- #275-004 - Type 1 Mechanical "Non Pusher" Seal

- #275-005 - Type 8 Mechanical "Pusher" Seal
 - #208-001 - [Shaft Alignment Tool Kit](#)
 - #208-003 - Standard Shim Kit
 - #275-027 - Elastomeric Element Coupling
 - #275-030 - Jaw and Spider-Type Coupling
