

Pump Maintenance with Alignment Trainer

Model: 275E

DAC Worldwide's Pump Maintenance with Alignment Trainer (275E) is a realistic, benchtop training system relating to industrial pumps. Using an actual standard ANSI centrifugal pump, the trainer allows for instruction in the complete tear-down and assembly procedure for this common pump type.

Additionally, a clear acrylic backhead is provided, allowing for realistic instruction in pump packing procedures and the installation of mechanical seals.

Pump Maintenance Trainers Offers Glimpse into Industrial Pumps

Further, a simulated motor element is provided, allowing for training in shaft alignment. This motor element, through movable flanged bearings, allows for variation in angular and parallel misalignment.

The trainer includes the following components: ANSI centrifugal pump, backhead/stuffing box, aluminum motor element, replaceable steel shaft with keyways, and aluminum motor mounting pads.
