

Tabletop Support Frame Assembly

Model: 373-002

DAC Worldwide's Tabletop Support Frame Assembly (373-002) is an optional display rack for the 373-Series panel-mounted HVAC cutaways, as well as other product cutaways and equipment samples. Fabricated from 16-gauge formed-steel and powder-coated standardized components, the assembly allows for 36" of panel mounting area. Thanks to its high-durability, power-coated surfaces throughout, this display rack allows for rough handling and will easily provide years of trouble-free duty in the training lab or classroom.

This assembly accommodates multiple 3", 6", 9", and 18" wide display panels, for convenient display or storage after hands-on use. It also includes provisions for mounting on related workstations, display structures, and integration benches. The **Extended Tabletop Support Assembly** ([373-002E](#)) is also available, and includes 48" of panel mounting area.

Coupled with cutaways and sample panels of choice, this assembly will create a permanent, professionally-crafted, comprehensive training display relating to a variety of topics.
