

Vortex Flow Meter Cutaway

Model: 273-727

DAC Worldwide's Vortex Flow Meter Cutaway (273-727) depicts an in-line, shedding vortex-type instrument supporting flow measurement in many applications. This widely-used device is commonly found in manufacturing facilities, petrochemical plants, power plants, and other similar industries where high temperature liquids or steam are being measured.

A vortex flow meter is a broad-spectrum flow meter that can be used for metering, measurement, and control of most steam, gas, and liquid flows. Vortex flow meters are relatively economical because of their simple flow measurement system and ease of maintenance. They are widely used in heavy industrial applications, power facilities, and energy industries, especially in steam processes.

The assembly includes a complete sectioned meter and a formed-steel mounting assembly. Through careful sectioning, the complete internal configuration of the device including the shedder bar can be seen while also allowing for disassembly for more complete inspection. The formed-steel baseplate and support brackets position the device for optimum viewing.

The cutaway is mounted on a 14-gauge, formed-steel, powder-coated mounting stand with component attachment brackets. It can also be mounted on related DAC Worldwide bench, workstation, display, and storage products.

FEATURES & SPECIFICATIONS

- Sectioning of actual industrial steel process component; models from well-known US manufacturers are chosen for industrial training relevancy
- Cleaning and painting using a high-durability urethane finish
- 14-Gauge, formed-steel, powder coated, mounting stand with component attachment brackets
- Provision for mounting on related bench, workstation, display, and storage products

PRODUCT DIMENSIONS

- 9-in. L x 9-in. W x 11-in. H (230 x 230 x 280 mm)

OPTIONS

- Recommended #902V - Mobile Display Stand
